RF Driver / Amplifier

0821

The RFA2120-1 is a combined 120 MHz oscillator and power amplifier suitable for driving UV acousto-optic modulators such as the M1340. This driver features both digital gate and analog modulation inputs for the control of the RF amplitude. Protection includes an internal over temperature sensor, and a 'Tranzorb' over-voltage diode on the DC supply input. An external interlock (or RF enable) input is provided.

The driver will operate from a +24V to +28Vdc supply. LED's indicate the status of the thermal interlocks, DC supply and RF power output. The RF output power limit is adjusted by means of a pre-set potentiometer.

The amplifier includes an integral water cooled base.
