

IMS4-P (revC) and AF0 Amplifier Connection Guide

Typical connection to D1422-XY with RF amplifier module AFM. (AF0 amplifiers shown separately for clarity).

Isomet: 2021-8-24

- **DC Power**

The AF0 amplifiers operate from +24Vdc, 0.7A (3A total for 4 off)

The iMS4- operates from +15V to + 24Vdc (<1A)

A single 24Vdc, 5A supply is suitable.

- **Interlock Connector**

Not used with the standard AF0 amplifier(s)

- **Software**

Download the latest software, SDK and Guide from the Support page:
