Tunable RF Driver

(Phase Delayed - Dual Output)

0420

The Model RFA3080-2 Deflector Driver is a class A solid-state RF source designed to drive *ISOMET* beam steered Acousto-Optic Scanners with up to 10.0 Watts total power across a frequency band of 65 to 95 MHz.

The driver controls include a 0 to +10 volt frequency tuning input and a 0 to +10 volt amplitude modulation input. Each output delivers > 5 Watt RF. Maximum gain is externally adjustable via a pre-set potentiometer. The start frequency is also adjustable and is set by the frequency offset potentiometer (FOS). An internal delay line introduces the correct phasing between the RF outputs, specific to the AO deflector. The base plate is water cooled.
